

UFO Occupants

According to the UFO literature, UFO occupants come in different humanoid shapes and sizes. Regarding shape, the occupants have more or less the basic humanoid shape: two legs, two arms, a head, and bilateral symmetry. Regarding size, the UFO occupants are typically described as being small, ranging from roughly 1 to 1½ meters in height. But some witnesses have also reported encountering humanoids ranging in height between 5 and 13 feet tall.

In a 1979 documentary film entitled **UFOs Are Real**, Ted Phillips of the [Center for Physical Trace Research](#) is quoted as saying: *"You find a surprising number of instances in which humanoids are reported...near the landed UFO. Some 22% or 325 cases involved humanoids. Generally described as small in size...kind of pale grey skin...little if any hair...wide set, quite prominent eyes...thin, spindly bodies...slightly enlarged heads, and wearing tight-fitting diver's suit, as it is generally described. In over 50 of the cases, there were found small footprints correlating of course with the small humanoids seen."*
